

**08**

**– Tuple/Set**

Examples:

Input: str = "01010101010" Output:

Yes

Input: str = "REC101"

Output: No

**For example:**

Input	Result
01010101010	Yes
010101 10101	No

Ex. No. : 8.1

## **Binary String**

Coders here is a simple task for you, Given string str. Your task is to check whether it is a binary string or not by using python set.

### **Solution:**

```
s=input()
count=0
for i in s:
    if ((i>='a' and i<='z') or (i>='A' and i<='Z')) or i==" ":
        count+=1
        break
if count==0:
    print("Yes")
else:
    print("No")
```

**Examples:**

**Input:**  $t = (5, 6, 5, 7, 7, 8)$ ,  $K = 13$

**Output:** 2

Explanation:

Pairs with sum  $K (= 13)$  are  $\{(5, 8), (6, 7), (6, 7)\}$ .

Therefore, distinct pairs with sum  $K (= 13)$  are  $\{(5, 8), (6, 7)\}$ . Therefore, the required output is 2.

For example:

Input	Result
1,2,1,2,5 3	1
1,2 0	0

Ex. No. : 8.2

---

## **Check Pair**

Given a tuple and a positive integer k, the task is to find the count of distinct pairs in the tuple whose sum is equal to **K**.

**Solution:**

```
t=tuple(input().split(','))
k=int(input())
d=[]
for i in t:
    for j in t:
        if int(i)+int(j)==k:
            if (i,j) not in d:
                d.append((i,j))
print(len(d)//2)
```

**Example 1:**

**Input:** s = "AAAAACCCCCAAAAACCCCCAAAAAGGGTTT"

**Output:** ["AAAAACCCCC","CCCCAAAAA"]

**Example 2:**

**Input:** s = "AAAAAAAAAAAAA"

**Output:** ["AAAAAAAAA"]

**For example:**

Input	Result
AAAAACCCCCAAAAACCCCCAAAAAGGGTTT	AAAAACCCCC CCCCAAAAA

## DNA Sequence

The **DNA sequence** is composed of a series of nucleotides abbreviated as 'A', 'C', 'G', and 'T'.

For example, "ACGAATTCCG" is a **DNA sequence**.

When studying **DNA**, it is useful to identify repeated sequences within the DNA.

Given a string **s** that represents a **DNA sequence**, return all the **10-letter-long** sequences (substrings) that occur more than once in a DNA molecule. You may return the answer in **any order**.

Solution:

```
a=tuple(input())
b=[]
for i in range(len(a)):
    b.append(a[i])
    if i==9:
        break
c=""
c="".join(b)
d=c[::-1]
if c!=d:
    print(c)
    print(d)
else:
    print(c)
```

**Example 1:****Input:** nums = [1,3,4,2,2]**Output:** 2**Example 2:****Input:** nums = [3,1,3,4,2]**Output:** 3**For example:**

Input	Result
1 3 4 4 2	4

Ex. No. : 8.4

---

### **Print repeated no**

Given an array of integers **nums** containing  $n + 1$  integers where each integer is in the range  $[1, n]$  inclusive. There is only **one repeated number** in **nums**, return *this repeated number*. Solve the problem using [set](#).

**Solution:**

```
nums=input().split()
for i in nums:
    if nums.count(i)>1:
        print(i)
        break
```

Sample Input:

5 4

1 2 8 6 5

2 6 8 10

Sample Output:

1 5 10

3

Sample Input:

5 5

1 2 3 4 5

1 2 3 4 5

Sample Output:

NO SUCH ELEMENTS

**For example:**

Input	Result
5 4	1 5 10
1 2 8 6 5	3
2 6 8 10	

Ex. No. : 8.5

### Remove repeated

Write a program to eliminate the common elements in the given 2 arrays and print only the non-repeating elements and the total number of such non-repeating elements.

Input Format:

The first line contains space-separated values, denoting the size of the two arrays in integer format respectively.

The next two lines contain the space-separated integer arrays to be compared.

### Solution:

```
n1=input()
n1=n1.split()

s1=input().split()
s2=input().split()
b=[]
count=0
for i in range(int(n1[0])):
    for j in range(int(n1[1])):
        if s1[i] not in s2 :
            if (s1[i] not in b):
                b.append(s1[i])

for i in range(int(n1[1])):
    for j in range(int(n1[0])):
        if s2[i] not in s1: if
            s2[i] not in b:
                b.append(s2[i])
while i!=len(b)-1:
    for i in range(len(b)):
        print(b[i],end=" ")
        count+=1
print("\n",end="")
if count!=0:
    print(count)
else:
    print("NO SUCH ELEMENTS")
```

Example 1:

Input: text = "hello world", brokenLetters = "ad" Output:

1

Explanation: We cannot type "world" because the 'd' key is broken.

**For example:**

Input	Result
hello world ad	1

Ex. No. : 8.6

### **Malfunctioning Keyboard**

There is a malfunctioning keyboard where some letter keys do not work. All other keys on the keyboard work properly.

Given a string text of words separated by a single space (no leading or trailing spaces) and a string brokenLetters of all distinct letter keys that are broken, return the number of words in text you can fully type using this keyboard.

#### **Solution:**

```
s1=list(input())
s2=list(input())
b=[]
count=0
for i in range(len(s1)):
    for j in range(len(s2)):
        if s2[j] in s1[i]:
            if s2[j] not in b:
                b.append(s2[j])
for i in range(len(b)):
    count+=1
print(count)
```

~ `	!	@	#	\$	%	^	&	*	(	)	-	+	 Backspace	
Tab 	Q	W	E	R	T	Y	U	I	O	P	{	}		
Caps Lock 	A	S	D	F	G	H	J	K	L	:	"	'	Enter 	
Shift 	Z	X	C	V	B	N	M	<	>	?	Shift 			
Ctrl	Win Key	Alt								Alt	Win Key	Menu	Ctrl	

### Example 1:

**Input:** words = ["Hello","Alaska","Dad","Peace"]

**Output:** ["Alaska","Dad"]

### Example 2:

**Input:** words = ["omk"]

**Output:** []

### Example 3:

**Input:** words = ["adsdf","sfd"]

**Output:** ["adsdf","sfd"]

### For example:

Input	Result
4 Hello Alaska Dad Peace	Alaska Dad

Ex. No. : 8.7

Date:

### American keyboard

Given an array of strings words, return *the words that can be typed using letters of the alphabet on only one row of American keyboard like the image below.*

In the **American keyboard**:

- the first row consists of the characters "qwertyuiop",
- the second row consists of the characters "asdfghjkl", and
- the third row consists of the characters "zxcvbnm".

### Solution:

```
letter_values = {  
    'A': 1, 'E': 1, 'I': 1, 'L': 1, 'N': 1, 'O': 1, 'R': 1, 'S': 1, 'T': 1, 'U': 1,  
    'D': 2, 'G': 2,  
    'B': 3, 'C': 3, 'M': 3, 'P': 3,  
    'F': 4, 'H': 4, 'V': 4, 'W': 4, 'Y': 4,  
    'K': 5,  
    'J': 8, 'X': 8,  
    'Q': 10, 'Z': 10  
}  
word= input()  
word = word.upper()  
total_score = sum(letter_values.get(letter, 0) for letter in word)  
print(f"{word} is worth {total_score} points.")
```
